Re: Dincel Wall

Dear Burak,

We have recently completed a prestigious project at 40 - 42 Park Road Hurstville and have another earmarked for completion soon at 184 - 186 Bronte Road, Waverley. Dincel wall was used extensively in both buildings.

We found the use of Dincel wall has resulted in major cost savings in our projects. In addition we were able to deliver the projects a lot quicker and with exceptional build quality including render finishes at the facade walls. Naturally then this has improved the brand of my business as my customers loved the fact that their residences were completed well before time and that they have a high quality home they can all be proud of.

Dincel further reduces builder's liability, your patented snap connection allows faster and safer erection method without having additional safety platform. The impervious Dincel with 120mm concrete slump avoids honey-combing, air voids normally experienced with other type of porous (hygroscopic) formworks. This of course eliminates potential problems with corrosion, acoustics, fire and structural non-compliance issues

We found your sales and support staff extremely helpful and easy to deal with. Their knowledge in construction is second to none and they always went out of their way in recommending best and cost efficient practices. Thank you for introducing to the market such an innovative and landmark solution. We look forward to working with the Dincel Wall on all future projects

Yours faithfully
