CLYDE DAISH • HD PROJECTS

Traditionally high bay warehousing builds turn to precast/tilt-up, however this site came with craneage constraints making this impossible. Trend Living reached out to HD Projects, looking for an alternative solution with a very simple brief - 6m high freestanding podium level walls, all walls plumb and minimal vertical bowing (due to height) to be achieved. With over 20 years full service installation experience, HD Projects turned to Dincel Structural Walling from a **structural integrity, compliance and buildability point of view**. An approximate 50% cost saving when compared to precast/tilt-up didn't hurt, either!
