

Introducing our latest  
industry innovation,

# 200P-5 CORNER PROFILE

**NEW**

**Our new two-piece corner for 200 Dintel consists of a removable cover which can either snap-click or slide into place and is able to offer the following benefits:**

### **Safer installation**

- ✓ **Click or slide connection** reduces mandatory scaffolding requirements (in comparison to slide only corners where it is typically required).

### **Easier access**

- ✓ Horizontal reinforcement bars can be installed into the wall corner with ease.
- ✓ As the corner cover can be clicked into place, steel reinforcement bars can be inserted at the top of the wall without having to slide off the whole cover.

**Manufactured in Australia**

### **Faster installation**

- ✓ Solid two-piece corner allows for assembly **without screwing or back propping**, even with full vibrator use at the corner.

### **Satisfy engineer requirements**

- ✓ Enables structural engineers to easily inspect steel reinforcement.
- ✓ Allows for easy installation of hair pin bars (two layers of reinforcement) at shear wall corners.
- ✓ **Full concrete infill achieved at the corners** (no voids), preventing water accumulation and increasing structural robustness.
